SUMMARY

Backend Software Engineer with hands-on experience building scalable RESTful APIs, relational database systems, and cloud-ready web applications using Python and Django. Proven ability to design secure, maintainable backend architectures following MVC/MVT patterns. Microsoft Certified in Cloud Platform & Infrastructure with exposure to AWS, Azure, and GCP deployment models. Founder of an early-stage tech startup and currently contributing to production backend systems at Enigmatix. Passionate about building high-performance, observable platform components that power real-world operations at scale.

EXPERIENCE

Enigmatix

Bahawalpur, Pakistan (Remote)

Backend Developer

July 2025 – Present

- Designed and developed backend-driven web applications using **Python** and **Django**, powering internal and external-facing services with clean RESTful API interfaces.
- Architected and implemented **relational databases** with proper normalization, indexing, and query optimization to ensure data integrity and retrieval performance.
- Built full **CRUD-based systems** following software engineering best practices, including separation of concerns, DRY principles, and modular code organization.
- Implemented **authentication systems**, role-based access control (RBAC), and admin panels, improving application security and access management.
- Applied **MVT/MVC architecture** patterns in production projects, enabling scalable and maintainable codebases across multiple backend services.
- Enhanced system reliability through active **debugging, performance profiling**, and optimization of bottlenecks in API response times and database queries.

Elevabel

Bahawalpur, Pakistan

Founder & Lead Engineer

January 2026 – Present

- Founded and led a tech startup, driving product architecture decisions and backend system design from the ground up.
- Spearheaded full-stack backend development, establishing scalable infrastructure, API design standards, and cloud deployment strategies.
- Managed cross-functional collaboration across product, design, and engineering, ensuring alignment on technical roadmap and delivery timelines.

PROJECTS

RESTful API Platform | *Python, Django REST Framework, PostgreSQL*

- Built a multi-endpoint REST API supporting CRUD operations, token-based authentication (JWT), and paginated responses for client-server communication.
- Optimized database queries using Django ORM with `select_related/prefetch_related`, reducing average response latency by over 40%.

Role-Based Access Control System | *Django, SQLite/PostgreSQL*

- Designed a modular permission framework with custom user roles, group-level policies, and admin dashboard integration for enterprise-level access management.

Cloud Infrastructure Lab | *Microsoft Azure, AWS (EC2, S3), Cloud Deployment*

- Completed hands-on projects deploying and managing cloud environments across Azure and AWS as part of Microsoft Certified Cloud Computing coursework.
- Configured virtual machines, storage buckets, and network policies to simulate production-grade cloud infrastructure setups.

TECHNICAL SKILLS

Languages: Python, SQL, Bash, JavaScript (basic)

Frameworks & Libraries: Django, Django REST Framework, Django ORM

Databases: PostgreSQL, MySQL, SQLite; familiar with Redis and DynamoDB concepts

Cloud & DevOps: Microsoft Azure (Certified), AWS (EC2, S3, RDS), GCP fundamentals, Docker (basic)

Architecture & Patterns: RESTful API Design, MVT/MVC, RBAC, CRUD Systems, Database Normalization

Tools: Git, GitHub, Postman, VS Code, Linux/Ubuntu

Concepts: Scalable API Design, Authentication & Authorization, Query Optimization, Debugging, Clean Code

EDUCATION

The Islamia University of Bahawalpur (IUB) <i>Bachelor of Science in Computer Science</i>	Bahawalpur, Pakistan <i>2023 – Present</i>
---	---

CERTIFICATIONS

Microsoft Certified Solutions Expert (MCSE): Cloud Platform and Infrastructure
Advanced Python Programming – Completed with focus on backend systems and application development
